2019 U.S. CATALOG

Pioneer History

The Pioneer story began in 1887 in boomtown Vancouver. In the 1890s, the founders grew the business quickly by supplying gear to prospectors arriving from all over North America heading to the famous Alaska/Yukon Klondike Gold Rush. These "sourdough prospectors", as they were called, fought mountainous terrain and the harshest climates in their long journeys to the northern goldfields. They relied heavily on their Pioneer gear to help them get the job done. Pioneer has now been keeping workers safe and comfortable for over 130 years.

Over these years, Pioneer has grown a reputation for designing and building high-quality and innovative protective and safety apparel. Using only the best/safest materials, componentry, and by using advanced sewing methods, Pioneer continues to deliver on safety, fit, durability, comfort and value for the professional worker.

Today Pioneer offers a complete selection of safety clothing including Hi-Vis gear, flame resistant wear, rainwear and much more... plus custom embroidery solutions. SureWerx combines Pioneer with the rest of the SureWerx family of safety brands to offer protection to workers from head to toe.

Klondikers carrying supplies ascending the Chilkoot Pass, circa 1898

Why Choose Pioneer?

- Century long reputation for delivering the highest quality and most durable safety apparel
- Independently tested to meet and exceed all stated safety standards
- Innovative new product solutions based on the voice of the customer
- Unique bar tacking operation on all key seams, pockets, and other areas of stress
- Custom embroidery and silk screen solutions available
- Exclusive StarTech® reflective tape

ANSI/ISEA 107-15 AMERICAN NATIONAL STANDARD FOR HIGH-VISIBILITY SAFETY APPAREL AND ACCESSORIES

What is **ANSI/ISEA 107-15** American National Standard for High Visibility Safety Apparel and Accessories?

The latest ANSI/ISEA 107-15 version consolidates the requirements of ANSI/ISEA 107-2010 and ANSI/ISEA 207, American National Standard for High-Visibility Public Safety Vests, in an effort to establish a single comprehensive document that considers all occupational tasks. The standard continues to present three performance classes of garments based on the amount of visible materials and design attributes incorporated into the final configuration, and identifies garment types based on expected use settings and work activities being performed. These are designated as off-road (type O), roadway and temporary traffic control (type R), or public safety activities (type P). For a detailed explanation of these standards, visit www.safetysupply.com/ansiisea-107-2015.

Listed below is a simplified explanation of the ANSI/ISEA 107-15 classes of garments:

CLASS 1—TYPE O (Off Road)

Class 1 safety apparel are for workers whose jobs puts them at the lowest risk level. These would be for environments where traffic is traveling at or below 25 mph and work is taking place at a safe distance from a roadway. An example of this type of work would be sidewalk repair in a small residential neighborhood.

According to ANSI, in order for a vest to qualify as a Class 1 Type O safety apparel, it must have 217 square inches of background material in safety yellow or safety orange and have a minimum of 155 square inches of reflective tape. These reflective stripes must go around the middle of the vest as well as over the shoulder. These ANSI safety vests are designed to cover the torso only and do not require sleeves.

As defined by ANSI, "Performance Class 1 provides the minimum amount of high-visibility materials required to differentiate the wearer visually from non-complex work environments, in scenarios in which the struck-by hazards will not be approaching at roadway speeds, and therefore operative detection and identification distances."

- Basic harness or safety tape over the shoulders and encircling the waist.
- Suitable in less complex work areas where workers are separated from car and truck traffic.
- **Example:** Class 1 = Class 1 tape configuration + non-retroreflective background material.
- Pioneer model #135AU (V1021571U) **Hi-Vis Safety Vest** and Pioneer model #337SFU (V2570470U) **Flame Resistant Zip Style Heavyweight Cotton Safety Hoodie** are both Class 1—Type O HVSA.

CLASS 1—TYPE O

ANSI/ISEA 107-15 AMERICAN NATIONAL STANDARD FOR HIGH-VISIBILITY SAFETY APPAREL AND ACCESSORIES

CLASS 2—TYPE R and/or P (Roadway, Temporary Traffic Control, and/or Public Safety)

Class 2 safety apparel is intended for working environments that pose a greater risk than Class 1. This can include workers who are on a roadway where traffic is moving under 50 mph. This apparel is larger than their Class 1 counterparts because they require more high visibility and reflective areas to be present. A Class 2 vest, for example, must have at least 775 square inches of safety yellow or safety orange background material and 201 square inches of reflective striping. Class 2 apparel are commonly worn by survey crews, airport baggage handlers, and school crossing guards.

- Full coverage of the upper torso including front, back, sides and over the shoulders.
- The background material must be high visibility.
- For use in more complex or low-light work areas requiring greater visibility.
- **Example:** Class 2 = Class 2 tape configuration + retroreflective background material.
- Pioneer model #6959U (V1023860U) **Hi-Vis Solid Multi-Pocket Safety Vest** and Pioneer model #6990U (V1051150U) **Birdseye Safety T-Shirt** are both Class 2—Type R and P garments.

CLASS 3—TYPE R and/or P (Roadway, Temporary Traffic Control, and/or Public Safety)

Class 3 safety apparel is reserved for people working in the most dangerous environments where visibility is the highest priority. This includes roadways where traffic is traveling in excess of 50 mph, but it can also apply to emergency personnel or tow truck operators working in extreme weather conditions where visibility is at a minimum.

Class 3 ANSI approved safety apparel requires the most background fabric and reflective striping. The standard includes 1,240 square inches of safety yellow or safety orange background with 310 square inches of reflective striping.

As defined by ANSI, "Performance Class 3 can offer greater visibility to the wearer in both complex backgrounds and through a full range of body movements by mandatory placement of background, retroreflective and combined-performance materials on sleeves and pant legs (if present). Regardless of the area of materials used, a sleeveless garment or vest alone shall not be considered Performance Class 3."

- A Class 2 garment combined with arm and leg bands.
- The background material must be high visibility to the standard.
- Hi-Vis coveralls meet this standard; safety jackets (Class 2) and pants (Class E) can be worn combined, or arm/leg bands can be added to Class 2 garments, to attain Class 3.
- Suitable for use in complex work areas where low light, fast-moving traffic and inclement weather are safety factors.
- **Example:** Class 3 = Class 3 tape configuration + retroreflective background material
- Pioneer model #6690U (V1023550U) **Hi-Vis Safety Vest With Sleeves**, Pioneer model #5022U (V1120350U) **Hi-Vis 100% Waterproof 6-In-1 Bomber**, Pioneer model #5999AU (V1070160U) **Hi-Vis Traffic Safety Coverall** are all Class 3—Type R and P garments.

CLASS 2—TYPE R AND/OR P

CLASS 3—TYPE R AND/OR P

SUPPLEMENTAL CLASS E

ANSI/ISEA 107-15 AMERICAN NATIONAL STANDARD FOR HIGH-VISIBILITY SAFETY APPAREL AND ACCESSORIES

SUPPLEMENTAL CLASS E

ANSI Supplemental Class E applies to Hi-Vis pants, bib overalls, shorts, and gaiters. Alone, these garments are not ANSI compliant. When combined with a Class 2 or Class 3 garment, the combination satisfies Class 3 requirements. This classification remains the same under the ANSI/ISEA 107-2015 standard.

ANSI designates "pants, bib overalls, shorts, and gaiters" as Class E.

- Class E garments must always be worn in combination with other items to meet HVSA PPE requirements.
- Class E items worn in combination with Performance Class 2 or Class 3 items will achieve an overall classification of Performance Class 3.
- Pioneer model #5404AU (V1200451U) **Hi-Vis 300D Ripstop Waterproof Safety Bib Pant** and Pioneer model #5999PU (V1070360U) **Hi-Vis Traffic Safety Pant** are both Class E HVSA.

Safety officials in your region determine the appropriate class wear for specific job sites. Hazardous risk assessment should be performed by a qualified individual to determine the applicable high visibility classification.

Women's Garment Sizing						
	XS	S	M	L	XL	2XL
Chest	32	34	36	39	42	45
Waist	24	26	28	31	34	37
Arms	29	30	31	32	33	34
Hip	35	37	39	42	45	48
Inseam	27	28	29	30	31	32
All measurements in inches. Talls in Coveralls are 2 inches longer in the torso and 1 inch longer in the sleeves and legs.						

Measurement Directions:

- Neck:** Measure around the base of your neck, round up to the next half-inch.
- Chest:** Measure around your chest, under the arms and across the shoulder blades, over a shirt if stomach is larger than chest; choose the larger size.
- Waist:** Measure around your waist at the level you normally wear your pants, over a shirt.
- Hip:** Standing with feet together, measure around the widest part of your hips, parallel to the floor.
- Inseam:** Measure a good-fitting pair of pants along the inseam, from crotch seam to bottom edge of cuff.
- Sleeve:** Bend arm and place fist on hip. Measure from centre back of your neck, across shoulder and down arm to elbow and then to your wrist. This is your sleeve length.

For working garments, measure liberally to find your size, as you need freedom of movement.

STAR★TECH®

STARTECH® reflective tape is exclusive to Pioneer safety products. It is designed and tested to far exceed the ANSI/ISEA 107-15 high-visibility safety apparel reflective tape standard.

StarTech® reflective tape has been independently tested to meet:

- ANSI 107-15 American National Standards Institute
- EN ISO 20471 High-Visibility Standard Level 2 high-visibility safety apparel and accessories

StarTech® FR tape is made of FR cotton or aramid material as backing and has been independent lab-tested to meet:

- CGSB 155.20-2017 (Heat-Resistant Test)
- NFPA 2112-2018 Standard on Flame-Resistant Garments for Protection of Industrial Personnel against short duration thermal exposure from fire

The many standards for reflective tapes all require passing a battery of tests that simulate working conditions.

These include measuring the retroreflective performance of StarTech® tape after being subjected to abrasion, multiple flexing, cold temperatures, variable temperatures, multiple washings, wet conditions, and, for the FR version, its heat resistance properties as well. Due to its premium design and quality, StarTech® tape not only meets but exceeds all of these standards!

PIONEER

HI-VIS FLAME RESISTANT APPAREL

NFPA (National Fire Protection Association) 2112-2018—Standard on Flame-Resistant Garments for Protection of Industrial Personnel Against Flash Fire

- NFPA 2112-2018 requires 3rd party certification through UL.
- Tests performed under NFPA 2112:
 1. **Heat transfer performance**—predict burn injury (2nd or 3rd degree burn).
 2. **Flame resistance**—ASTM D6413 as received and after 100 wash cycles. Tested for 3 secs.
 3. **Thermal shrinkage resistance/Heat resistance test**—Oven test at 260° C.
 4. **Manikin testing**—ASTM F1930—Manikin has sensors and is subjected to 84KW/m² for flame for 3 secs. to verify if 2nd or 3rd degree burns are recorded.
 5. **Thread melting resistance**—260° C of heat is applied to verify if thread melts.
 6. Other tests included: label legibility, fabric weight, tensile strength, tear strength, material burst strength, laundering shrinkage, colorfastness, seam efficiency.

Electric Arc Standards

Test Method:

- **ASTM F1506-2018**—Standard Performance Specification for Flame Resistant and Arc Rated Textile Materials for Wearing Apparel for Use by Electrical Workers Exposed to Momentary Electric Arc and Related Thermal Hazards.

Standards:

- **NFPA 70E-2018**—Standard for Electrical Safety in the Workplace.

What is ARC Flash?

When an electric current passes through air between underground conductors or between underground conductors and grounded conductors, temperatures can reach 20,000° C (35,000° F).

Exposure to these extreme temperatures burns the skin directly and ignites clothing, which adds to the burn injury.

The majority of hospital admissions due to electric accidents are from arc flash burns, not from shocks.

ASTM F1506-2018

- Both NFPA 70E and CSA Z462 define the following categories for ARC rated clothing.
- ATPV (Arc thermal protective value)—point at which 2nd degree burn is registered on the sensor and fabric is still intact.
- EbT (Break-open threshold)—point at which 2nd degree burn is registered on the sensor and fabric has broken/formed a hole.
- Minimum ARC rating required 4 Cal/cm²
- ARC 1—4 Cal/cm² to 7.9 Cal/cm²
- ARC 2—8 Cal/cm² to 24.9 Cal/cm²
- ARC 3—25 Cal/cm² to 39.9 Cal/cm²
- ARC 4—40 Cal/cm² and up.

Tests in this standards go way beyond testing for ARC rating:

- Breaking load test—Grab test
- Tear resistance
- Seam slippage
- Colorfastness—Laundering/ Dry Cleaning—3 cycles of washing,
- Dimensional Change—Max 3%
- Flammability—Char length needs to be below 150mm.
- Before and after 25 washes, Bursting strength, Arc Rating

WARRANTY

Garment and Safety Gear

Pioneer warrants all garments to be free of defects in materials and workmanship under the normal use for which the product is intended. Normally, a garment defect of manufacture will show up in the first two months of use.

This warranty is limited to product failure as a result of seam separation, broken snaps or zippers, material delaminating, or any defect in material or workmanship that affects the performance of the garment.

Excluded from this warranty are products that have been affected by cuts or punctures, disfigured from continued wear or use, and products that have been exposed to solvents or excessive heat which may degrade their performance and garments that have not been maintained as per wash care instructions on the garment.

Warranty claims will only be provided for those products that have been made available for inspection by Pioneer. Any warranty claim on garments that have been purchased over 60 days ago will have to be accompanied by pictures and/ or defective garment itself for inspection. To maintain our health and safety standards, all products returned for inspection must be free of all removable debris. Any products returned that do not meet the above conditions will be returned to the customer at their expense.

Pioneer shall not be liable for indirect, special, incidental, or consequential damage or penalties and does not assume liability of purchaser or others for injury to persons or property.

For a warranty claim on a Pioneer garment, please contact your local sales or customer service representative.
